

## Topic is: Model Field options?

Use to choices key-word    Example: `choices=SHIRT_SIZES`.

Test 01 use to simple way of code using to drop down 2 simple examples.

Note: You can also use enumeration classes to define **choices** in a concise way:

Test 02 simple way of code in drop down sort way creating.

Test 03 using to primary key True or False.

## Automatic primary key fields :

Primary key=**True**

Note: Each model requires exactly one field to have **primary\_key=True** (either explicitly declared or automatically added).
